

Asynchronous Activity 1 Evidence

KNIME Student Early Warning Tool and GitHub Submission

Student: Paolo Gorospe

Course and section: CS0065 - Intelligent Systems, AN43

Repository: SatoruAkaibara/Gorospe-Paolo-CS0065-AN43

Evidence order

1. Dataset and input configuration
2. Column selection and train/test partition
3. Decision Tree configuration and evaluation
4. Completed classifier workflow
5. Git Bash commands and successful results
6. GitHub repository verification

Screenshots are arranged in the order of the activity instructions.

Guide part-by-part evidence map

KNIME workflow evidence

Supporting evidence for Part 1 project preparation and the exported workflow.

Part 1 - Prepare the Project Folder

Dataset, workflow, README, and final DemoEarlyWarningTool folder.

Part 2 - Create README.md

README.md is included in the project folder and shown on GitHub.

Part 3 - Create the GitHub Repository

The public repository root is shown in the GitHub screenshot.

Part 4 - Open the Correct Folder in Git Bash

pwd and ls are included in the Git Bash command record.

Part 5 - Configure Git Identity

git config commands are included in the Git Bash command record.

Part 6 - Initialize and Commit the Project

git init, branch, status, add, and commit are recorded.

Part 7 - Connect the GitHub Repository

git remote -v is recorded.

Part 8 - Push the Project to GitHub

git push and its successful result are recorded.

Part 9 - Existing Files and Merge

The pull/merge procedure is listed for the non-fast-forward case.

Part 10 - Organize Files in the Project Folder

The GitHub DemoEarlyWarningTool folder is shown.

Part 11 - Update the Project Later

The final update commit and push are recorded.

Part 12 - Evidence PDF and MS Teams

The evidence file and final GitHub folder are shown.

Git Bash commands and successful results

Parts 4-8: navigation, identity, initialization, remote, and push

```
$ cd "/c/Users/paolo/Documents/Codex/2026-09-16/"
asynchronous-activity-1-submission-instructions-attached/work/repo"

7.

Workflow diagram showing a Data Table input connected to a Table Partitioner. The Table Partitioner splits the data into two paths. One path goes to a Decision Tree Learner, and the other to a Decision Tree Predictor. The output of the predictor is connected to a Scorer node. A preview window shows a scatter plot of data points.
